

Small Radiator Kit Installation Instructions

1. Remove new parts and inspect.
2. Remove stock radiator, fan, resistor block, and upper radiator hose. Leave lower radiator hose installed in the car.
3. Attach foam strips to sides of radiator using supplied hardware.
4. Attach cooling fan to radiator.
5. Set radiator into bottom bushing and use stock bushing to hold top into place. Drill hole in core support and use nut and bolt to secure.
6. Reattach lower radiator hose and install supplied upper radiator hose.

8. Fill the new Radiator with coolant and bleed the system.
